

What people are **saying** about Veinplicity

I've experienced quite a few problems when having a cannula put in. Sometimes the tourniquet has been left on for a long period of time, which is uncomfortable. My veins are not always accessible on the first attempt, so it can sometimes be a little traumatic. That's where Veinplicity® has really helped me.

Wendy, patient
UK

The Veinplicity device brought up a vein in my hand that my team hasn't been able to use before. Knowing that I have another vein option that can be accessed quickly is a real relief.

Kate, patient
UK

I've been amazed by the results I've had with Veinplicity. The device really does increase vessel size and success rates for venepuncture and cannulation. As a nurse practitioner, I think it could really revolutionise practice.

Andrew Barton, Advanced Nurse Practitioner
Vascular Access & IV Therapy, UK

Once I've applied the Veinplicity pads, I can visibly see the vessel engorge a couple of minutes later. It really helps me as a practitioner to be able to access a larger vessel straight away.

Maya Guerrero, Clinical Nurse Specialist
Vascular Access & IV Therapy, UK

The Veinplicity device is less painful than using a tourniquet. All you feel is vibration.

Tuliama, patient
UK

Testimonials from our clinical trials:

I have blood taken regularly and it is horrible. Sometimes I even have to come back or drink a gallon of water before they try. This device really will change my life.

Patient
US

Elderly patients benefit from Veinplicity because the device increases both vein availability and size, making access easier for those with small, frail veins.
